What was done

The finished product is a top-down horror escape game made with Phaser 3. It consists of four rooms and a final timed logic puzzle room. The goal is to move through each room and solve the final puzzle to get out and escape. In each room, the player will find and collect a key, a flask, and a note. The key opens the door to the next room. You need all objects to get through the final door into the puzzle room.

The player will encounter three different types of monsters:

- Rush: a dark mist that moves through the room, damaging the player if they get caught in it. You must hide from it in the crates that are placed around the room.
- Screech: appears next to the player. The player must click it within a timeframe to banish it. Optionally, you can also hide. If the timer runs out without a counter action taken, the player takes damage.
- Eyes: when the eyes open, you must stand perfectly still. If the player moves when they are open, the player takes damage.

Tools and technologies

- Phaser 3.90.0, HTML, CSS, JavaScript
- VS Code with Live Server, Git and GitHub
- Art: Rogue Fantasy Catacombs (Szadi art.), DungeonTileset II (0x72)
- Sound: Pixabay sound effects. Music by Kevin MacLeod, SouljahdeShiva, and Eric Matyas. Credits in README for all art and sound
- Claude (Anthropic)

AI declaration

I used Claude Sonnet 5.5 chat for these things:

- Planning and discussion: what tools to use and where to find them, how to use them
- Writing code: most of the JavaScript was written with the help of Claude. I asked how to code specific parts like “how to implement this art pack I found” or “how to draw a key shape with code”
- Explaining and teaching the code to me
- Debugging help
- Making README and report drafts (just structure) that I then wrote myself.
- Basically, I mostly used Claude as a teacher to help with things I haven’t learned to do before.

Points I claim, total of 40:

Feature	Evidence	Points
Report	this	3
Responsive on desktop and mobile	scales to any screen, touch controls for mobile (joystick and buttons)	4
Firefox, Safari, Edge and Chrome	all tested	3
Clear directory structure	yes	2
Clear plot with a start and an end	story intro, journey, outro	2
Name on the scoreboard	name, tries and times, saved in the browser	2
Different objects to collect	keys, flasks, notes	1
Moving parts	walls closing in (final room), doors sliding open, mist crossing the room	2
More than one map	4 rooms + final room	2
Keyboard and mouse used meaningfully	WASD/arrows move character, E to hide, click with mouse to banish a monster, mouse also used in puzzle	2
Enemies that can hurt the player	3 different enemies that take hearts	2
Music and sound effects	14 sound effects and 4 music tracks	2
Touch screen	joystick, buttons, taps	2
Menus, settings and scenes	menu, how to play, settings, scoreboard, rooms, game over, results	2
Transition effects	fades between every scene	1
The game has adaptive sounds	the music changes between menu, rooms and the final room, but doesn't react to danger	maybe 1 point
Adaptive graphics	a pulsing red edge when you are down to 1 heart	1
Director system	director system makes sure monsters events don't overlap and create unfair moments	2
Scoreboard fairness	clock counts only active play, only finished runs count, same name inputted continues the last try	1
Atmosphere	rooms, character, sound is cool	3
